Profile

Product Manager with 10+ years building complex digital platforms across AI, gaming, and blockchain ecosystems. Experienced designing AI-driven products including RAG pipelines, LLM-based applications, and event-driven AI agents. Strong focus on measurable product impact through data-driven prioritization, funnel optimization, and scalable platform architecture.

Core Achievements

- Led product definition for Hypereal, a real-time AI agent platform using RAG and live data ingestion, enabling event-driven automation workflows for SMEs.
- Delivered NFT creation and minting tools at The Sandbox, reducing purchase issues by ~70% across large-scale drops and supporting higher creator throughput.
- Directed design system migration to modular microfrontends, improving platform scalability, roughly doubling release velocity and cutting UI-related development time by ~50%.
- Built creator tooling and automation dashboards that reduced NFT collection launch cycles from days to hours, improving internal production throughput and campaign reliability.

Experience

Toluna - Market Research & Consumer Insights Platform

Senior Product Manager | May 2026 – Present

Scope: Own product definition for AI-driven research workflows and complex data capabilities within Toluna Insights, working across product, engineering, data, UX, and research operations.

- Conversational AI: Defined the MVP and product architecture for an LLM-powered research assistant, covering natural-language interaction with survey data, AI-generated recommendations, conversational editing, state management, error handling, and implementation workflows.
- AI Governance & Reliability: Specified controls for grounding AI outputs in available research data, separating factual findings from interpretation, managing permissions and unsupported requests, and supporting auditability and production monitoring.
- Data Platform & Analytics: Specifications for migrating complex survey-data processing from legacy systems, covering reusable transformation logic, derived metrics, respondent-level calculations, ingestion-time processing, persistence, reprocessing, and synchronization across distributed data systems.

The Sandbox - Blockchain & Metaverse Gaming Platform

Product Owner / Manager | Feb 2023 – May 2026

Scope: Owned the onboarding and creator-tooling backlog across design (4), engineering (32), and data (5), prioritizing work using funnel metrics and creator workflow bottlenecks.

- Contributed to a KYC provider migration, shaping onboarding constraints and integration requirements to balance compliance needs with user activation and onboarding friction.

- FTUE optimization: identified the highest-friction steps via competitor analysis and user testing, killed friction generating features and delivered a redesigned spec with simplified steps, now in implementation.
- Minting DApp: Spearheaded a minting tool that cut purchase issues by ~70% across large-scale NFT drops (five-figure unit volumes).
- Collection Configurator: Built procedural generation system for NFT collections, using Mixpanel data to drive iteration, reducing errors by over two thirds per campaign, as measured by Jira dashboard reports.
- Design System: Unified fragmented UI components into a modular design system, reducing design debt across squads and cutting UI-related dev time by ~50%.
- Pipeline Dashboard: Introduced a scalable creation dashboard that trimmed the average NFT-collection cycle from multiple workdays to just a few hours.
- Launcher Redesign: Re-scoped bloated feature requests to focus on performance; designed a lightweight bootstrapper to reduce startup friction and support higher activation rates.
- On-chain Transformations: Delivered token-burn and NFT-transformation mechanics with real-time analytics dashboards, drawing thousands of new players within a quarter.
- Technical Debt Reduction: Reserved a quarter of the roadmap to address inherited technical debt and refactor the Marketplace, achieving ~70% faster page load (sub-5-second range) and a double-digit uplift in sales.

Impact: Boosted creator throughput by ~70%, drove double-digit MAU growth, and improved QA efficiency by ~50% across cross-squad projects.

QED Builders - AI, Web & Blockchain Agency

Product Owner (part-time) | Feb 2023 – Dec 2024

Hypereal

- Led product definition for a RAG-based AI platform enabling event-driven agents reacting to live data streams (RSS/APIs).
- Defined pay-per-execution product model, GTM strategy, and full technical specification for MVP development and fundraising.

Claudebin

- Designed workflows enabling prompt reuse and structured collaboration around LLM prompt workflows.
- Positioned the product around reproducible AI workflows and knowledge sharing for teams working with LLM tools.
- Launched claudebin.com, a public platform for sharing and versioning Claude conversations.

Other Products

- Led SenSei, a multiplayer on-chain fighting game - delivered v1 product definition and game economy framework.
- Shaped Dreme, an AI-powered dream interpretation app - delivered TAM/SAM/SOM research, ready for dev UI/UX and defined MVP scope for initial concept validation.

Rain Digital - Web Design Agency

Project Manager | Oct 2018 – Feb 2023

- Delivered redesigns and QA for international tennis tournaments: Dubai Duty Free, Rogers Cup, BNP Paribas Open.
- Managed live scoring infrastructure, streaming systems, and real-time content delivery under event deadlines.
- Supported major digital campaigns and large-scale virtual events.

Inter-Web - Web Design Studio

Founder | Dec 2013 – Oct 2018

Built and launched 40+ WordPress websites with integrated SEO, analytics, and digital marketing campaigns.

Technical & Product Stack

- Product & PM Tools: Jira, ClickUp, Monday, Notion, Teamwork, Metabase, Mixpanel
- AI & Data: LLM workflows, RAG systems, prompt engineering, vector retrieval concepts
- Design & UX: Figma, Photoshop, Premiere Pro, After Effects (basic)
- Development & Ops: Git, VS Code, Docker (basic), Postman

Education

- Master's in Publicity & Sales Promotion - University of Economy and Business Administration, Timisoara (2012)
- DELF B2 - French Ministry of Education / C1 German - Goethe-Institut / C1 English - University of Cambridge

Talks / Projects

- Speaker at the PROW Product Conference (2025): AI × retrofuturism art installation project
- Creator of VOID AI installation (2026 exhibition): void2.art
